

6th Annual

*Celling* 49 PAP Tested Yearling Angus Range Bulls

#### They Can Take it

Yes, it's just a bunch of horses standin' out there in the rain. The reason they are doin' it is easy to explain. There is no shelter handy, so to travel ain't no good; And they wouldn't go into a barn, not even if they could.

It is just a little weather, and they're plenty used to that. Like a cow boy in the open, livin' underneath his hat. All the horses and the people that has lived their life outside. Seems to have a constitution that can take it on the hide.

Without a bit of thinkin' I could tell you right from here, Of horses livin' on the range as long as thirty year. While the horses that's in stables, and was always roofed and fed. Lots of them before they're twenty, has been hauled off plenty dead.

So it seems the way with people, and it seems the way with stock. And the cedar grows the toughest when it's right amongst the rocks. That's why horses, men, and women, if they're made of proper stuff. Gits along a whole lot better if they're raised a little rough.

- Bruce Kiskaddon

# Welcome

Thank you to all of you for your interest in our program here, and welcome to our 6th annual Loyning Angus sale.

As our "Simply Maternal" motto suggests, we are all about maternal functional efficiency. In our commercial herd, the cow that goes unnoticed the longest is the best cow. She is the cow whom we've never had to interfere with in any way. She does her job and never draws negative attention to herself by under producing. In a range cow outfit, the cow that overproduces generally works herself out of a job. So, we're back to that old cow that has done her job well enough within your environment/management system who as your trailing along one day, you wonder to yourself, "Who is that cow? She is ten years old, and I don't really remember anything about her." I'll tell you who she is. She is your most profitable cow. She is that go out and produce functionally efficient range cows for our customers. You'll find the steer calf mates produced will be very acceptable in terms of terminal merit within your system too.

The ideal cow in our mind's eye is feminine headed, long necked with a strong level topline and is wedge shaped in her body composition. She is structurally correct, slopes off slightly from hooks to pins, is strong hocked, and has good feet. She has an excellent udder, and is moderate in her milk production. She is hormonally balanced as evidenced by her sleek and glossy hair coat. She is highly fertile. She has a soft and intelligent eye. This cow is of exceptional maternal disposition. Her whole world revolves around her calf, and she wants and loves to be a mother. She knows how to go out, forage, and scrap for her living if need be. This cow is closely bred for added prepotency to produce consistently and be able to renew herself through her daughters. These unquantifiable traits/qualities seem to get forgotten in the world of bigger is always better and biggest is best.

In the race for EPD, carcass, DNA marker superiority, or whatever it may be, maternal traits are generally the first traits to be left in the dust. Contrary to popular belief, you can't have it all. There are tradeoffs in everything. At Loyning Angus, we bowed out of the race a long time ago. Hell, we were never really in it. We want to focus on making the mother cow better at what she does. She is our factory after all, and we want to optimize her. Instead of single mindedly worrying about the quantity that our factory produces (at all costs), we want to optimize the functional efficiency of our factory and focus on the quality of what she's producing. Our focus is "Simply Maternal." We want you, our customer, to be able to produce females that enhance your bottom line through the ability to limit feed and labor expenses. Should you have specific end product goals in mind, you have the flexibility to terminally mate those females and hit those targets. We must remember that terminal traits belong on a plate and not in the replacement pen though.

With all that said, we run these cows as real as we can. They range on high desert native grass pastures for 8-10 months of the year depending on what mother nature

will allow. We don't prop them up, and if they are going to fail, we let them. During the two to four-month period they aren't on range grass, they eat hay. This winter they came out of the hills about the 25th of February. They are currently being fed 21 pounds of hay, a mixture of alfalfa and barley hay along with free choice salt and mineral. These cows would be an extremely profitable set of commercial production cows for any range cow outfit on the northern plains. They know how to get it done.

We breed our running age cows in multiple sire breeding pastures. This ensures that the herd bulls have to compete in order to mate and propagate themselves. Parentage is then determined on the resulting calves through DNA. During our fall preconditioning work, we choose the bulls that make the cut and our replacement heifers before DNA parentage results are known. This eliminates any preconceived notions on who ought to be the best. None of "He's out of old such and such he ought to be okay." They either make it, or they don't. All of the sires to these bulls breed/bred cows. The same can't be said about many AI stud sires as they never leave their run, and when they do, it is usually to be canned as the industry has moved on to the next latest, greatest thing.

As you look through our pedigrees, you will see that part of the bulls selling are registered and part are commercial purebred bulls. One group of the commercial purebreds stem from females purchased starting in 1993 from Cole Creek Angus. We didn't keep registration papers up on these cows, but we did keep track of pedigree. They are 100% purebred Angus. The Cole Creek based cows' sons will have a C following their name in the catalog. The other group stems from a set of cows purchased from my late friend Larry Leonhardt at Shoshone in 2011. The solid foundational base behind these bulls, with our own environmental and selection pressures applied to make "Simply Maternal" Loyning Angus cattle. The Shoshone based cows' sons will have an SH following their name in the catalog.

This set of bulls was weaned off of native grass pasture, mother's milk, salt, and mineral. At weaning they went on free choice sanfoin/orchard grass hay and two lbs. of AminoMAX Bull Developer. They are now worked up on to 11 lbs. of AminoMAX and are consuming about 15 lbs. of orchard grass hay per day. On average, they have gained 2.8 lbs. per day. The bulls were weighed onto test at weaning 10/18/23 and were weighed again on 2/26/24 for a 131-day test. The gain ratio was figured during that period. We slowly grow these bulls out in order to ensure structural soundness and set them up to succeed in rough breeding pastures. We understand that the breeding season is a marathon not a sprint and marathoners aren't obese. These bulls are developed to go out and stay strong and productive throughout the entire breeding season and seasons to come. Yes, they will work down some, but the bull that doesn't generally isn't doing much. We will not be clipping the bulls as we like to be able to see them in their full hair coat. Their coat is a good indicator of masculinity and hormonal balance. These bulls have been handled almost exclusively horseback for their entire lives and are generally easy to handle and respect a saddle horse.

Prior to the 2020 breeding season, we made the decision to concentrate on further enhancing the ability of our cattle at high altitude. I searched and researched for the right outcross to bring in that would not disrupt the "Simply Maternal" direction of our program. All roads led to certain lines within the Emulation population. We are aware of the reputation for poor dispositions within the Emulation line and have been very careful in screening these genetics we've brought in. Initial results look very promising/useful and we look forward to using these genetics to further enhance the Loyning Angus line. We want these cattle to be able to thrive anywhere in the west, high or low.

This year we have added carcass ultrasound as another tool to aid customers in their selection process. The bulls were scanned by Eric Geving on 3/1/24. In this catalog we have published the IMF ratio and an actual REA/cwt. We will have a full supplement sheet of all carcass data available on sale day.

I would like to thank Dennis Voss at Horse Butte for being a mentor and one heck of a good friend to me. Our herd is strongly influenced by Horse Butte genetics, and they are a big part of our program and its forward progress. I want to thank all of my friends that I regularly "talk shop" with. I enjoy the hell out of it. Next I want to thank all my good neighbor friends/customers. We wouldn't and couldn't be here without you and all of your help! Grandma Bonnie, without your good summer grass and moral support we couldn't do it. Thank you! Dad, thank you for your patience, encouragement and stockman knowledge. Your "range savvy" guidance has a strong influence on us pressuring the things we pressure in our program. I know I can get gruff and hard to be around sometimes, but I always appreciate everything

you do for us. Mom you're about the best MOM (notice the capitalization) a guy could ever want. Thank you for always having my back. Thanks to Brook's family for always helping us whether it's babysitting or working cattle. We know we can always count on your help. Brook, thank you for not killing me during our work on this catalog.

If you have any questions, please don't hesitate in letting us know. We are honored by your consideration of our program.

Ben Loyning

## <sup>6<sup>th</sup> Annual Bull Sale</sup> Saturday • April 20, 2024

Sale Starts at 5:00 p.m.

### Auctioneer

Bronson Smith

#### Sale Day Phones

Ben . . . . (307) 271-1786 Brook . . . (307) 202-0246 Please stick around after the sale to socialize and enjoy a meal.

#### Sale Location

At the Ranch • 379 Quarry Road • Warren, MT

#### **Accommodations**

60 minutes South of Billings, MT and 40 minutes North of Powell, WY

#### Sale Format

Bulls will be available for viewing at the sale location. We will play a pre-recorded video of the bulls during the auction for buyer viewing during the live auction.

#### **Terms & Conditions**

The cattle will sell under the standard terms and conditions as recommended by the American Angus Association.

#### Herd Health

Bulls have been vaccinated twice (branding/preconditioning) with Alpha 7 MB1, One Shot BVD and Inforce 3, once with BoviShield Gold One Shot and Somubac (weaning), and in November were poured with CleanUp II and injected with Dectomax. On 3/10/23 received a dose of Bovi-Shield Gold FP 5 VL5 and a shot of Fusogard for foot rot.

#### **Fertility**

A breeding soundness exam was completed by Matthew Asay, DVM on March 18, 2024. A comprehensive supplement sheet with motility and morphology scores will be available sale day or contact us prior to sale day and we would be happy to share that information with you.

#### **PAP Tested**

Bulls were PAP tested March 22, 2024 by Flying A Animal Health, Allen Gotfredson, DVM from Ten Sleep, WY. PAP test was at 4,750 feet. We recommend if bulls will be used over 7,500 feet, that they have a PAP score of 41 or below.

#### Delivery

Delivery for bulls is free within 300 miles and at cost thereafter. If you pick your bulls up within the week following the sale, a \$50 per head discount will be given. Delivery will take place within the month following the sale. If you need your bulls sooner than that, please let us know. Feed up until the first of May is on us and will cost \$2.50 per head per day thereafter if you want us to keep your bulls.

The cost for health work on bulls selling to Canada will be the responsibility of the buyer. We will deliver bulls going to Canada to the nearest American Port of Entry.

All proper health work will be completed for shipment within the continental US.

#### Liability

Everyone attending this sale does so at their own responsibility and risk and without liability on the part of the owners or their employees.

#### **Inspection of Bulls**

The bulls are available for inspection any time prior to sale day at the ranch, 379 Quarry Road, Warren, Montana. The day of the sale we ask that you hold off until noon so that we can prepare the bulls for more convenient viewing. Videos will be posted online at LoyningAngus.com.

#### **Retained Interest**

Loyning Angus and Wil Loyning will be retaining interest in select bulls. The bulls we are retaining interest in will be posted sale day and announced from the auction block.

#### Guarantee

Bulls sell as guaranteed breeders. If a problem arises, we will deal with it on a case by case basis. Your success is important to us, so we want these guys to do a good job for you.

#### Bid by Phone

If you are unable to attend and would like to bid by phone, please give Ben a call at (307)-271-1786. We will have someone call you during the sale or you can leave a bid. You can also call Karoline Rose at (406) 285-1907

#### **Online Bidding**

New this year we have added online bidding ran by KRose Company. You can register to bid and find more information on our website at loyningangus.com/productionsale. Please call Karoline Rose with questions or help registering to bid at (406) 285-1907.

#### Sale Terms

Cash, to be paid sale day.

#### Sale Order

Bulls sell in catalog order which is by age, oldest to youngest.

#### Tag Color Key

Black – ET Red – Natural born registered Yellow – Trace to unregistered Shoshone cows White – Trace to unregistered Cole Creek cows Purple – Wil's cattle Orange – Sam's cattle Pink – Josie's cattle Blue – Gus's cattle

Absentee bidding available up until sale day | Live bidding available during the sale

Sire of lots 14, 17, 20, 24, 38, 39, 41 Loyning 1116 Encore 76 AKA "Boulder Top" was used here are a yearling and them was used in heavy service at our friends Boone and Marje Taylor's y-Bar Ranch in Bicknell, Utah for a couple of years before we brought him back into service here. The Taylors run cattle up to 12,000 ft and the Boulder Top nickname is an homage to the highest timbered plateau in North America where they summer their cattle. Boulder Top had a PAP score of 38 at 7,300' as a 2 year old. After calving his first daughters here, we just had to have him back in our own mob. They look to be optimal in their type, and are stamped in the same mold as Boulder Top's full sisters in production here. Feminine, fertile, wedge shaped, good udder quality, optimal level of production. Along with offering a high level of maternal prowess at upper elevations, Boulder Top offers some calving ease too. Look for more influence from Boulder Top genetics in the years to come. Boulder Top has moved on and is now breeding cows for Dockweiler Angus in Chadron, NE. We have retained 4 sons from the 2023 calf crop to further his influence here.

Bred by Loyning Angus and proudly owned with Boone and Marje Taylor, Y Bar Ranch in Bicknell, UT and John and Ann Dockweiler in Chadron, NE.

Sire of lots 1, 2

Etch 80 sold to Horse Butte Ranch as the Pick of the Flush in our inaugural sale in 2019. He was a very complete individual, thick made, attractive and correct. He has went on and spent some time at the top of the heap in the mob at Horse Butte. I always wanted to bring him back into the program and when we flushed the DDA Galatea 859 he was my first choice. He didn't disappoint. That flush yielded two nice bulls and two nice heifers. The bulls are in the sale and the two heifers will be retained in our herd. We have plans to use Etch further at some point in the future.

Bred By Loyning Angus and proudly owned with Horse Butte Ranch

Sire of lots 6, 19, 32

81 was the bull we chose second when we sold choice of the flush at our inaugural bull sale in 2019. He is conformationally very correct and stands on excellent feet. He is clean made with a very strong top and is an excellent worker in the breeding pasture. He has several daughters in the replacement pen. We should see more 81 in the future and it is our hope that he and brother 83 carry the torch for their sire in the future here. Flush sisters are very productive calf raisers in an angular, functional, feminine package. Bred and owned by Loyning Angus

Sire of lots 4, 5, 10, 11, 25, 28, 29

83 might have been the sleeper in a rally strong 7133 X JAD Ester 3750 flush. He has a similar look to his maternal brother Equinox at this stage. Long, thick, and correct. He is also the most moderate framed of the group of flush brothers that stayed here. He has excellent testicular conformation and an overall virile look about him. We are now calving 83 daughters. They look to be feminine, broody, milky, and productive range cows. Solid stuff.

#### Sire of lot 12

Deference

Echosmith 87 is a close bred bull who is just about equal parts Shoshone Encore, Shoshone Echo/Balboa, and Shoshone Ester 3128. He is very functionally correct and virile. The 87 son in this sale is stamped in his mold. The 87 daughters that we have in production are sharp made, refined, and functional.

Sire of lots 8, 13, 15, 16, 26, 31, 33, 37, 40, 44, 46 Forkin 92 was the bull we chose to keep from the Viking X Frances 6306 flush. He was the most moderate, cleanest patterned bull in the flush. He was used in a single sire pasture on our Ester cows for the 2020 breeding season. Shoshone Frances 6306, his dam, was a model cow in her heyday. We thought 6306 would be a positive influence to bring in and stir the pot just a bit. He has sired some nice sons in this sale offering. His daughters are moderate, easy doing, and broody. Bred by Scott Shively and owned by Loyning Angus.

#### Sire of lots 3, 9

1138 means ranch foreman in Spanish. He's a boss kind of bull. He is a thick made athletic bull out of a sweet little cow. Yes he performed well and did everything we asked but ultimately his mother was the deciding factor in keeping him here. She is ultra feminine yet sturdy enough, is very functionally efficient in her make-up, and her maternal disposition is as good as it gets. 1138's pedigree is made up of excellent range cattle and that is what I expect he and his sons to leave behind. We have retained several nice 1138 heifers and I'm anxious to get them into production. Expect to see more from 1138 in the future.

Sire of lots 42, 47, 49 We bought 82 (aka Johnny X) sight unseen from Dockweiler Angus in Nebraska. Originally he was brought here for use on the commercial cows. When he arrived, I really appreciated his quiet demeanor, length, soundness, and masculinity. Johnny X also has a beautiful dam, S41, who I had seen on a previous visit. While I loved the dam side of his pedigree, the sire side of his equation was very proven too. His sire N Bar Extra B310 A144 produced useful, long lasting females, virile sons, and his progeny were always deceptively heavy when they crossed the scale. Johnny X also descends from lines known to thrive at high altitude. The more I studied him, the more I knew I needed to use him. It was a no brainer. 82 had already been through a season of use at Dockweiler's when we got him. He was as influential there as any yearling bull has ever been, siring a very high volume of high quality, useful heifers and bulls. As a multi-sire breeding bull, he is top notch. In the breeding pasture, he is very methodical, moving from one hot cow to the next; never in a hurry, breed them once and move on. He has excellent constitution and holds up well throughout the breeding season. We are now calving the first Johnny X daughters and they look every bit the part of a hard working, problem free, fertile, productive range cow. I believe the Johnny X sons in this sale are as commercially relevant as anything we've ever offered. They will be functional and profitable for every segment along the chain.

Bred by and proudly owned with Dockweiler Angus

**Sire of lots 18, 50** We bought Old Soul through the 2020 Sinclair Cattle Company sale to use as a heifer bull. His mother was Logan Bakers favorite cow 4ET1 and his paternal grandmother 7V19 was my favorite cow from a previous visit. 4ET1 set the standard for foot/udder quality, fertility and production at Sinclair. She was a problem free, hardworking cow. She died at 15 the summer she was nursing Old Soul so he was a little behind most of the other bulls in that sale and went relatively unnoticed. He had/has excellent feet and I thought he was the most athletic, best structured, bull in the sale. I got him bought and hauled him home. When I unloaded him, I felt like a thief as I watched him glide around the pen with ease and intelligence. He had an all knowing, wise beyond his years way about him so we changed his name to Old Soul. His sons are moderate, strong topped, and intelligent in their demeanor. They also PAP tested really well. His daughters look good. They are feminine, long, productive and graceful in motion. We are very pleased with Old Soul progeny thus far. • Bred by Sinclair Cattle Company and proudly owned with Baker Livestock and Sinclair.

Sire of lots 7, 30, 44, 48

OOV10 or Kevin as he's known around here was brought in to inject a little more bone and substance. We thought he was the best bull offered in the 2021 Sinclair sale. Kevin is thick made, with a long stride, good feet, good nuts, good disposition, good performance, and a strong maternal heritage. We thought he could bring in some more performance without too much disruption to our maternal direction. The Kevin sons are square made and easy going. We are calving his first daughters and they are deep bodied, yet feminine, easy doing, nice uddered, quiet dispositioned mothers so far. The Kevin sons will be a nice way for old customers to inject some new blood.

• Bred by, and owned with Sinclair Cattle Co.

Sam, a freshman, at state wrestling

We start the sale with maybe the most complete individual we've ever publicly offered, and he belongs to our youngest son Gus. Gus had a really nice heifer lose her calf due to severe cold so I offered him an embryo of his choosing and Lot 1 is the embryo he chose. I'm not a fan of using too many superlatives, but, this is a Bonified, Grade A, All-American, Bad Ass Herd Bull. His dam and maternal granddam were always my favorite cow pictures in the Diamond D Angus sale catalog as I believe they are fine examples of high quality, functionally efficient maternal traits. Naturally when we had the chance to bring 859 into our program we jumped on it. We flushed her to Loyning Etch 80 and ended up with 2 bulls and 2 heifers, all very useful in their make-up. Lot 1 is hard for me to pick on. He has that herd bull presence and athleticism in a very attractive package. He's the real McCoy. I'll shut up now and let him speak for himself. We would like to collect a bit of semen for our own use before this bull leaves.

Lot 1 on summer grass

This flush brother to Lot 1 offers many of the same features as his brother. Lot 2 might be just a hair more moderate in his frame, maybe a bit more muscle expression and comes with an excellent disposition.

It was -20 and windy on the night Lot 3 was born. His mother got him up and going without my assistance. It was a feat far above and beyond any reasonable expectation. She was probably telling the other cows "I can't believe that idiot turned the bulls out that early!" Well that idiot agrees, and decided to turn the bulls out a few weeks later the next season. Don't hold his short ears and frozen nostrils against him. Heifer bull.

The old reliable 4020 strikes again. This bull would be classically linebred Horse Butte 7133 of 3131. If you like self reliant range cattle, then this bull has much to offer your program. Although he is a lower birthweight bull, there is some potential for more birthweight behind him. Be your own judge. His dam is a maternal sister to lot 34, if you want to buy into our program, buy them both and turn them out!

Attractive Kevin son with herd bull type potential. His pathfinder dam, Loyning Ester 7000, has put 5 good bulls in the sale who have all went onto be favorites at their new homes. She finally had a heifer calf for us this year! This high performance bull has jumped through every hoop. He should sire payweight in his steers and deep made, broody, functional daughters. Lot 7 was on my short list to stay here and breed cows but we can't keep them all. Excellent cow bull.

83 con fr	om a solid rand	no con in	5010 501	O is an oa	ou doing r	ino

83 son from a solid range cow in 5010. 5010 is an easy doing, nice uddered, and I guaran-damn-tee no predator is ever going to get her calf. When tagging, I can get by her fine but she is very protective where everything else is concerned. 5010's last son she had in our sale has been very successful breeding cows in rough country in Nevada. This bull full of good Horse Butte-Encore-Ester breeding.

This 92 son is a tank. He's deep made, long, and thick. He comes by it naturally. His Equinox dam is made much the same but is still feminine and has an impeccable udder. She hails from the good Shoshone Prudence tribe, never a bad thing. This stud should be used on cows.

Excellent Boulder Top heifer bull. He reminds me very much of Horse Butte 7196 of 1916, who was bred similarly. The 7196's were/are everything you'd want from a range cow. Very self reliant and functionally efficient. I still have a bank of 7196 semen that I will plug back in here someday. Lot 17's dam is a flush sister to Loyning Evolver 73. She and her sisters are excellent cows. She would weigh about 1150 lbs and is ultra feminine and functional. Lot 17 is my kind of masculine/muscular and always seems to be in the fray to be the top of the pecking order. Another one I'd like to turn back out here.

This bull was born as half a set of twins with another bull. He was raised by his then 12 year old dam while his brother was grafted onto another cow. As the twins progressed through the summer it was pretty clear to me that they were fraternal twins and not identical twins, so far less likely to fertilize cows with semen that will split an egg into identical twins. Bovine twins are a love/hate hate thing for me. I love getting an extra calf as generally we'll need one at some point, but I loathe the extra amount of labor they might require. We're about making life easier for you, not making more work! I do love my human twins, but they can be a pain too! At any rate Lot 23 looks a lot like his sire and should make someone a good heifer bull. Lot 23 is not registered but could be.

Lot 24's maternal ancestry is as strong as anything in this sale. The Shoshone cows I consider to be the big three, Ester 3116, Prudence 6157, and Frances 6357 all play important roles in his genetic make-up. Pedigrees don't lie and usually win the day. His dam is deep made, easy doing, excellent footed, and perfectly uddered. Lot 24 is slick haired, fired up, and ready to go. I would feel alright with using him on some heifers. Good maternal influencer.

Thick, rugged made Kevin son with more bone and substance than average. His pedigree is made up of outcrosses but his dam is very ideal in her type as are ALL of the 612 daughters. He should be a good bull to add more terminal merit and still leave you with some useful females. Sturdy cow bull.

If an outfit's herd was made up of cows like the dam of Lot 34 it just couldn't help but be profitable. She's 13 years old never and missed a lick in our program which is very much at the mercy of mother nature's whims. She stems from my very original cow and is very near and dear to me. If you want to buy into the program this is an excellent choice. I can look back in my minds eye and see those cows all the way back to the beginning and they were solid. I really like this bull.

I realize we skipped lot 35. There is a good reason as he pretty well made an ass of himself while we were filming for the sale the other day. Poor decision on his part as he will now enter the food chain much sooner than the original plan. Enough of that. We've got far more agreeable bulls to offer such as this good bull of Sam's. Lot 36's dam is sturdy, good uddered, and very dependable. Solid cow bull.

Josie's bull here is square made and very attractive. He was a bit stiff on the day we filmed sale videos. Our breeding soundness exam was just two days before that and they have really been fighting/riding ever since. He's fine and I bet he will strut come sale day. Lot 38 is a nice example of a Shoshone/Emulation linecross. His dam is deep made, feminine, with the udder you'd expect from her pedigree. Her dam is Josie's 8019 cow who is a daughter of 1081. 1081 is the dam of lot 34, and maternal granddam of lot 6. Excellent choice for heifers or cows.

Moderate, masculine heifer bull. Off the top of my head there is 13 shots of Shoshone Ester 3116 pretty close up in this pedigree. I really like his young dam, 037. She is very feminine, perfectly uddered, and functionally efficient. 037 calved late as a heifer, caught back up significantly with the birth of Lot 39, and calved right at the front end this year. She looks poised to be one of the "picture cows" moving forward. I really toyed with the idea of keeping this bull to breed heifers here as he is just a bit different than the other Boulder Top sons. This good bull has an organized pedigree to back him.

Loyning Ester 037 Dam of Lot 39

While we generally offer bulls chocked full of "Ester," this one is more full up on Frances. If you've been to tour Shoshone, you'd note that there are a pile of cows with numbers beginning with 63. Those are the Frances'. The Frances who is the mother of this good bull is impeccably uddered, feminine, and approaching ideal in her type. Solid cow bull.

Handsome headed(unlike his owner), high capacity Boulder Top son of Wil's. His 9 year old pathfinder dam is broad muzzled, good footed, perfect uddered, and just doesn't miss. Lot 41 had one of the higher ultrasound IMF scans. Good all-around heifer bull here.

Johnny X Heifer bull from an excellent young Esteem daughter, 003. We pulled 003's son from the sale last year and kept him to use as a heifer bull here. 003 is just really hitting her stride and it looks like she'll have another bull in next year's sale. She is pretty complete. We have calved several heifers bred similarly to Lot 42 this spring and its all good. They are long, broody, and appear milky with excellent udders. Lots of commercial, economic relevance in these Johnny X cattle.

Sam

Interesting bull here. He's the only 93 son in the sale and his mother is on heck of of nice cow. She is a full sister to Equinox, Erector, Encore 71, and a whole batch of good cows here. This guy has an excellent disposition, always coming to check me out, lick my coat, I guess he wants the attention. "Hey you dip! Look at me!" He's worth looking at, too. Long, strong top, nice headed, with a bit more muscle than I would've expected given his pedigree. He also scored pretty high on ultrasound REA. Loads of "Simply Maternal" in Lot 43. You be the judge in terms of calving ease with this good bull.

Josie got in the branding pen this year

92 son out of a pathfinder Equinox 7 daughter with knockout good looks. She's long, she's feminine, she's the right size, she's fertile, she's good uddered, like the band Shocking Blue sang in the song Venus "She's got it, yeah baby, she's got it." Long made cow bull here.

**Loyning Ester 9007** Dam of Lot 44 and maternal sister to Lot 17

Wil's Kevin son from his good 81 daughter, 083. 083 is easy doing, wedge shaped, with a nice udder. She's just getting going but if this calf is an indication of what's to come bright days are ahead for her. Lot 45 is a thick made easy doing kind of bull with all kinds of solid behind him. Good cow bull.

This Johnny X heifer bull comes from Wil's 9W cow. 9W is an ultra sharp made Evolver daughter of his 7W cow. She is beautiful in her femininity, and very functionally efficient. Lot 47's pedigree is full of cattle who are/ were successful range cow producers and I suspect he'll continue that heritage.

The performance standout of the set. You name it, he did it better than pretty much everyone else. While he is full of potential terminal merit, don't write him of in terms of maternal potential. His pathfinder dam is excellent. Feminine, wedge shaped, broody, productive, and perfect uddered. She hails from the great Shoshone Prudence cow family with 6157 being her maternal grandmother. These first Kevin daughters we are calving also are broody, excellent uddered, with quiet maternal dispositions. This good bull should probably be used on cows,

**Shoshone Prudence 6157** Maternal great granddam of Lot 48

Good Johnny X son from a sharp made Echosmith 87 daughter. His dam is Shoshone "Yellow" in her type that is just getting started here, and has all the pieces I have spouted out over and over while writing these footnotes. As far as calving ease goes, you be the judge on this one, but I think he'd probably work fine.

Old Soul son from one of my favorite 612 daughters. In reality it's pretty hard to pick a favorite 612 as they are carbon copies of one another and are all near ideal. This is a nice younger bull who is always trying to establish his dominance in the group. He's like a terrier, no back down in his DNA. Lot 50 had a lower birthweight himself, but his mother had a 93 lb heifer calf the other day. I would probably lean towards using him on cows, but you decide.

Loyning Burgess Pride 8025 Dam of Lot 50

#### ONE MORE DAY

Even with our progress some things stay the same. Cattle still need brandin. There are horses yet to tame.

Cowboys will always ride. They' 11 head, heel, and haze. Making lasting memories, these are their "good old days."

As the lonesome sun is setting on our last sky of blue, we' Il think back on good times and friends who helped make dreams come true.

> The only favor I would ask before I m called away, is let me be a cowboy again for one more day.

This mystery man wandered in from Northwest of here this summer - stay tuned for next year's sale to learn more about him.
